TR Press Release

TR Fastenings Introduces Blind Rivet Nuts for Sheet Metals and Plastics

2015

Global leading manufacturer and supplier TR Fastenings remains at the forefront of fastener technology with the latest introduction of its vast range of Blind Rivet Nuts in response to customer demand.

These mechanical fasteners ensure a strong thread in a thin sheet and provide the most versatile solution where there is little or no access at the rear. Available in many variations and sizes, TR's huge stock allows delivery mostly within 24 hours.

Blind Rivet Nuts – also known as Gripserts, Coleserts and Blind Nuts, can be easily installed into sheet metal as well as tubing and extrusions in steel, stainless steel, aluminium and a variety of plastics.

They are available in body styles of round, knurled and hexagonal with head styles of Flange, Countersunk and Reduced in aluminium, steel and stainless steel in sizes M3 to M10 with grip ranges of 0.5 to 6mm. Invented in the United States in the 1930s for the aerospace industry, applications now include medical, marine, automotive, aerospace, white goods, telecoms, electronics and general engineering.

TR's Blind Rivet Nuts provide many benefits including a stable thread on thin-walled components, simple blind (one-sided) installation, fast assembly time, low assembly costs (easy installation with 1 single operation of the hand), low installation costs (no expensive setting tools needed), working in close-to-edge applications and no damage to painted or finished surfaces. They can be set with a hand or pneumatic tool, a press or an automatic installation unit. They can be also used to clinch separate sheets together (acting as a rivet) allowing assembly of another component with a bolt or screw.

These sheet metal products form part of TR's extensive portfolio which include the genuine Hank rivet bush, self clinch studs, K-Series nuts, cage nuts, weld studs & nuts, swage nuts and the Euro rivet bush. Looking ahead, TR's in-house Branded Products Team will be introducing self clinch clear hole standoffs, studs and standoffs for thin sheets in the near future.

Paul Standing, TR Fastenings' Commercial (Products) Manager comments: *"TR remains committed to providing the best available range of products, service and support to all our sheet metal customers. Our branded range has expanded by over 20% in the past five years, as we respond to customer's needs."*

2015

TR Fastenings has added new materials and sizes to its wide range of studs for the sheet metal sector.

The high strength studs for thin sheets are available in hardened stainless steel and TR's standard flush-head studs are now available in two new sizes - M2.5 and M8. Across the range sizes are ex-stock in diameters from M2 - M10 and lengths from 5mm - 50mm.

These new products form part of TR Fastenings portfolio of sheet metal products, including genuine:

- Hank rivet bush
- Blind rivets
- Blind rivet nuts
- K-nuts
- Cage nuts
- Weld nuts
- Swage nuts
- Euro rivet bush

The vast majority of TR's stud range is produced by the company's manufacturing plant in Singapore and these newly available sizes of self-clinch studs have been introduced in response to customer demand.

These studs are used widely by sheet metal subcontractors for a variety of applications including metal equipment, marine, automotive, white goods, telecommunications, electronics and general engineering.
