

TR Fastenings to showcase its expertise in the EV market at Battery Tech Expo 2024

TR Fastenings Ltd (TR), part of the Trifast plc group of companies, is exhibiting at Battery Tech Expo – the UK’s largest technical expo dedicated to the battery industry. The event welcomes hundreds of senior decision makers and users from across the power industry who all share a professional interest in advanced battery technology and energy storage.

For the seventh year, the event will once again be held at the world-famous Grand Prix venue, Silverstone, a leading hub of the high-tech engineering sector.

The roles of fasteners and engineered components within Electric Vehicles has increased significantly year on year as the industry advances at pace. It is timely, therefore, that TR Fastenings is able to showcase its expertise and extensive product range designed for the EV and EVCU markets, this includes products such as battery retention bolts, cable management hardware, compression limiters and designed in special components.

Sven Brehler, Director of Engineering, says: “We’ve been supplying key components for the EV market for many years, and have expanded our product range to meet the huge demand from car and battery manufacturers around the world. The sector continues to surge forwards and we’re pleased to be able to support the growth of our customers along the way. This Expo is really great for TR as it gives us the opportunity to meet with so many professionals across the battery technology sector.”

Joining Sven at the event will be Dan Pereira, Engineering Manager UK & Ireland and Liam Cullen, Business Development Manager.
